SUMMARY

Computer Science junior with an Applied Mathematics minor, focused on full-stack development, front-end application support, cloud applications, and database-backed systems. Built and maintained web, GUI, and backend projects using React, TypeScript, JavaScript, HTML, CSS, Python, Flask, FastAPI, PHP, SQL, and AWS. Seeking 2026 software engineering, front-end, full-stack, cloud, or application development internships.

EDUCATION

University of Wisconsin–Stout

Menomonie, WI

B.S. Computer Science, Minor in Applied Mathematics; GPA: 3.43/4.0

Expected Dec. 2026

- Dean's List: Spring 2023, Spring 2025, Fall 2025
- Relevant Courses: Software Engineering Practicum, Software Engineering Principles, Database Systems, Algorithms, Operating Systems, Cryptography, Formal Languages and Automata, Statistics, Computer Architecture

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, C++, C#, SQL, PHP, C

Frontend: React, Vite, Redux, Tailwind, HTML5, CSS3, responsive design, UI debugging

Backend & Databases: Flask, FastAPI, Node.js, REST APIs, MySQL, SQLite, AWS RDS, Auth0

Cloud & Tools: AWS EC2, S3, RDS, Terraform, Linux/Ubuntu, Nginx, Gunicorn, Git/GitHub, Postman, CMake

Workflow: Agile/Scrum, sprint planning, standups, retrospectives, regression testing, documentation

SOFTWARE EXPERIENCE

Software Engineering Capstone Developer, IIIF 3D Manifest Editor

2026 – Present

React, TypeScript, Vite, Tailwind, JSON, IIIF Presentation API

github.com/Wilsont0554/ManifestEditor

- Developing a user-facing 3D viewing and manifest editing website that helps users create, edit, preview, import, export, and download structured IIIF 3D manifests.
- Built and maintained editor workflows for adding 3D models, images, cameras, lights, annotations, metadata, transform controls, and live JSON preview.
- Supported software evolution by improving existing UI flows, refactoring components, cleaning type/dependency issues, and preserving import/export compatibility.
- Participated in Agile/Scrum ceremonies including sprint planning, standups, sprint reviews, and retrospectives while writing user stories and confirmation criteria.

PROJECTS

RankMyStocks | *React, Vite, Redux, Auth0, Flask, MySQL, AWS EC2/RDS*

2025

- rankmystocks.com | github.com/pandeyp1426
- Developed and deployed a full-stack stock discovery and portfolio ranking app with React, Flask REST APIs, Auth0 login, MySQL persistence, and AWS hosting.
- Designed portfolio, transaction, and snapshot tables, migrated persistence to AWS RDS, and deployed the backend on EC2 using Ubuntu, Nginx, and Gunicorn.
- Integrated live market data, portfolio performance views, market news, and optional AI-generated daily digest features.

Cryptography CTF Challenges Workspace | *React, Vite, FastAPI, Python, SQLite, RSA*

2026

- github.com/pandeyp1426/Cryptography_CTF_CHALLENGES
- Built a full-stack CTF solving workspace with challenge input, file upload parsing, streamed solve steps, progressive hints, flag detection, and SQLite solve history.
- Implemented front-end challenge flows, backend solve endpoints, RSA helper logic, and step-by-step crypto writeups for classroom-style challenges.

Fiber Optic Alignment and Test Station Simulator | *C#, .NET 8, WinForms, SQLite*

2026

- github.com/pandeyp1426/Fiber-Optic-Alignment-and-Test-Station-Simulator
- Built a personal desktop simulator project with a WinForms GUI, simulated sensor readings, validation rules, and SQLite test result tracking.
- Simulated X/Y alignment, optical power, temperature readings, pass/fail tolerance checks, and reviewable test history inside the application.

WFC Biome Generator | *C++, SFML, CMake, OOP, Procedural Generation*

2026

- github.com/pandeyp1426/WFCBiomeGenerator
- Built a C++/SFML desktop app that generates biome maps using Wave Function Collapse-style constraint propagation and DFA-based adjacency rules.
- Structured biome rules, cells, entropy updates, rendering, and regeneration controls using object-oriented design and CMake project setup.

LEADERSHIP & CREDENTIALS

Event Manager and AWS Core Team Member, UW–Stout AWS Club

Dec. 2025 – Present

Cloud computing workshops, student mentoring, event coordination

Menomonie, WI

- Coordinate with club members to teach and support students learning AWS services, Terraform, EC2, S3, RDS, cloud deployment, and related cloud computing tools.
- Help plan technical workshops, promote club events, organize room logistics, and create hands-on learning opportunities for students interested in cloud computing.

Credentials: [AWS Cloud Club Core Team Badge](#), AWS Community, Dec. 2025 | [Google Data Analytics Foundations](#), Coursera, Mar. 2025
